Digital Book Purchase Project

This is a fictional project that aims to apply microservices concepts and further improve skills in the field of application development.

1. System Request

Digital Book Purchase Project

Developer: lânderson de Almeida

Business Need: This project aims to expand reading universally through the purchase of books that can be found on the internet, using the website.

Business Requirements: Through the Website, customers will be able to search for and purchase digital books that can be downloaded onto their devices. The system should have features such as:

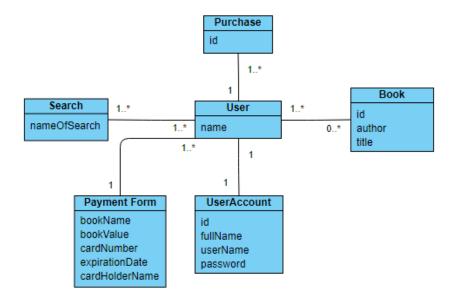

- Create a user account
- Search for any book in the system
- Buy digital books

2. Requirements Definition

Functional Requirements:

- 1. Search
 - 1.1. The system will allow the user to search for books.
 - 1.2. The system will allow the user to browse through a list of existing books.
- 2. Purchase
 - 2.1. The system will enable the user to create a user account to store user data.
 - 2.2. The system will enable the user to select the book chosen for purchase.
 - 2.3. The system will collect the user's payment data. Once payment has been verified, the book will be available for download.

3. Domain Model Definition
